The oral and practical exams are the last steps for certification of an Aviation Maintenance Technician (AMT). The AMT Oral & Practical Exam Guide by industry expert Dale Crane (edited by Raymond E. Thompson) will prepare the reader for the General, Airframe, and Powerplant exams. This book includes information on the certification process, typical projects and required skill levels, and practical knowledge requirements in a question-and-answer format, with references defined for further study. When taking an FAA Knowledge Exam, you merely verify your knowledge of facts--you interface with a computer and there is no personal involvement. The AMT oral and practical tests are different: you work one-on-one with an experienced mechanic evaluator who is able to not only judge your mechanical skills, but observe how you think and see the way you solve problems. The examiner determines whether or not you possess the knowledge and skill level needed as an entry-level technician, as defined by the FAA Practical Test Standards (PTS). The AMT Oral & Practical Exam Guide will help you prepare for this significant step towards your new career as an AMT.

The "Inspection Authorization Test Prep" provides Aviation Maintenance Technicians (AMTs) with all the information needed to pass the FAA's Knowledge Exam for Inspection Authorization, and helps candidates become familiar with the privileges and limitations of the highest level of maintenance certification. This book is an important reference source for all AMTs seeking to add Inspection Authorization (IA) to his or her qualifications, as well as AMT schools preparing students for the IA test. All IA candidates must take and pass the FAA's exam, yet it remains a "closed test" in that the exact database of questions is not available to the public, which makes the IA Test Prep a great way to prepare for it. The IA exam differs from other FAA exams in that questions do not refer to a specific figure. Instead, applicants must learn to glean the information they need from the FAA Supplement (CT-8080-8) made available for use during the test. The over 500 sample questions typify those that candidates are likely to encounter, and train readers in the use of the available documents. Answer choices are supported with explanations, with FAA references identified for further study. Also provides details on what applicants need to know about the certification process, insight into the function of an IA, and excerpts of regulations, advisory circulars, airworthiness directives, type certificate data sheets, FAA orders and aircraft specifications. Resources such as pertinent excerpts from these FAA documents and more are reprinted in this study guide; additionally, readers can access additional study material for this book at a special "Reader Resources" page at the ASA website. The IA Test Prep conveniently compiles the reference materials necessary to prepare for this exam into one volume, for an organized study program that AMT schools, instructors, and individuals alike can use to streamline their studies.

Dale Crane's Aviation Maintenance Technician Series is the essential resource to pass the FAA Knowledge Exams for Aviation Maintenance Technicians. This volume of the series covers the AMT "General" section of the curriculum.

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

The report documents the results of a national survey of book publishing firms and aviation maintenance technician schools to (1) identify the text materials used in the training of aviation mechanics; (2) appraise the suitability and availability of identified text materials; and (3) determine the adequacy of the text materials in meeting the curricula requirements of FAR Part 147. The study surveyed 239 book publishing firms and 105 aviation maintenance technician schools. There were 4,349 students who participated in the reading experiment and 103 instructors who administered the reading experiment in 41 aviation maintenance technician schools. Both students and instructors evaluated the text materials used in the reading experimental study. (Modified author abstract).
