While grading the strength of recommendations and the quality of underlying evidence enhances the ...

The panel drafted recommendations for each key clinical question that had sufficient evidence. Recommendations were graded using the CHEST grading system, based on GRADE, which is composed of two parts: the strength of the recommendation (either strong or weak) and a rating of the overall quality of the body of evidence.

The grades of recommendation (1A-2C, consensus-based [CB]) and the approach to rating the quality of evidence are defined at the end of the "Major Recommendations" field. For adult patients complaining of cough, the Expert Panel suggests that acute cough be defined as being <3 weeks in duration (Grade 2C).

In 2006, CHEST adopted a modified system of Grading of Recommendations Assessment, Development, and Evaluation (GRADE) to support their rigorous guideline development methodology. The evolution of CHEST's Living Guidelines Model, as well as their collaborative efforts with other organizations, has necessitated improvements in their guideline development methodology.
